

Iveco Ağır Ticari Araç Kataloğu

Iveco Heavy Commercial Vehicles Catalogue

2025

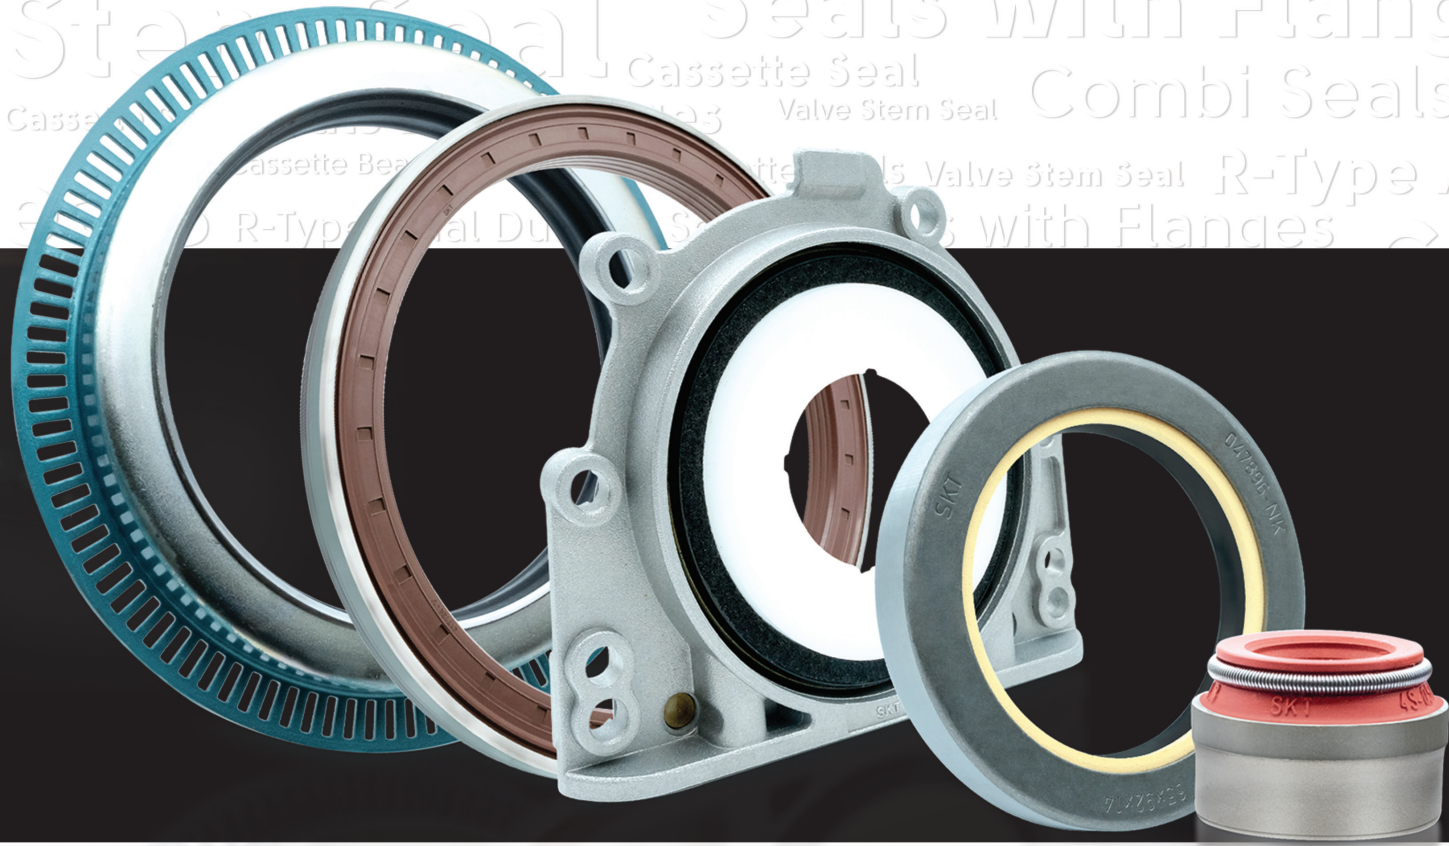

Sealing Technologies

A LONG-ESTABLISHED
HISTORY OF
MORE THAN
HALF A CENTURY

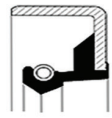

Bu katalog içinde yer alan araç üreticilerin orijinal ve eşdeğer ürün üreticilerinin parça numaraları; SKT ürünleri ile karşılaştırma bilgisi içindir. Bilgilerin doğruluğu için hiçbir garanti verilemez ve oluşacak hasarlardan sorumluluk kabul edilemez. Katalog içinde yer alan bilgiler gerek duyulursa değiştirilebilir. Bu tür kataloglar telif hakları ile korunmakta olup tamamının veya herhangi bir bölümünün çoğaltılması yasaktır.

The part numbers of original and equivalent product manufacturers listed in this catalog are for comparison purposes with SKT products. No guarantee is provided for the accuracy of the information, and we accept no responsibility for any damages that may occur. The information contained in the catalog may be changed if necessary. These types of catalogs are protected by copyright, and reproduction of all or any part of the contents is prohibited.

A. KAUÇUK DUDAKLI KEÇELER

1. Mil ve yuva; ölçüsel tolerans standartlarına uygun - hasarsız ve temiz olmalıdır.
2. Kauçuk malzemeli keçelerin dudakları montajdan önce ortam yağı ile yağlanmalıdır.
3. Keçe montajında uygun bir aparat kullanılmalıdır, kesinlikle çekiç kullanılmamalıdır.
4. Yay boyları kısaltılmamalıdır. Kısaltılırsa; aşırı sürtünmeden dolayı dudak ve mil hızlı bir şekilde aşınır.
5. Keçe dudağındaki sağ-sol helisel dönüş yönüne dikkat edilmelidir.
6. Kaset ve ABS tipli keçeler yapısal olarak çok hassas bir çalışma sistemine sahip olduğu için montaj sırasında keçenin metal kısmı üzerinde hasar bırakacak darbelerden kaçınılmalı ve aparat kullanılmalıdır.
7. Montajdan sonra keçenin salgısı kontrol edilmelidir.
8. Yuva çok bozuk değilse sıvı conta kesinlikle kullanılmamalıdır.

B. PTFE DUDAKLI KEÇELER

1. PTFE malzemeler mekanik olarak dayanımları zayıf olduğundan kesinlikle hasar görmemeli, mil yüzeyi uygun olmalıdır. PTFE dudağa kesinlikle el ile dokunulmamalı, metal bir madde değmemelidir.
2. Uygun bir aparat yardımı ile montaj yapılmalı çekiç kullanılmamalıdır.
3. PTFE keçeler, keçe üzerinde gelen plastik бага ile birlikte yuvaya yerleştirilmeli ve montaj işlemi bitince plastik бага yerinden çıkarılmalıdır.
4. PTFE malzemeli keçelerin dudakları kesinlikle yağlanmamalıdır. PTFE malzemesinin sürtünme katsayısı çok düşük olduğu için kuru çalışabilme özelliğine sahiptir. PTFE keçenin dudakları yağlanır ise ortamda bulunan her türlü aşındırıcıları mil ile dudak arasına toplayacağı için mekanik aşınmadan dolayı keçelerin ömrü kısa olur ve yağ kaçağı oluşabilir.
5. Montaj'dan sonra keçenin ölçüsel değerlerine ulaşabilmesi için motor, en az 4 saat sonra çalıştırılmalıdır. Eğer motor daha erken çalıştırılır ise keçe ölçüsel olarak gerçek boyutlarına ulaşılacağı için yağ kaçar.

A. ELASTOMERIC LIP SEALS

1. Shaft and housing need to be clean, undamaged and dimensionally appropriate.
2. Elastomeric lip seals are to be lubricated with the ambient oil before installation.
3. A special installation tool is to be employed and never a hammer.
4. Garter springs are never to be shortened. (Shortened springs cause excessive tightness and eventually more wear of shaft and seal.)
5. Direction of the helical ribs on the sealing lip is to be taken into account.
6. When installing cassette and ABS type seals, hammering metal cases is to be avoided in order to prevent damaging blows, since those seals are very sensitive.
7. Seal runout is to be checked after the installation.
8. Gasket sealant is not to be used unless the housing is very defective.

B. PTFE LIP SEALS

1. Due to being weak in terms of mechanical strength, PTFE lip seals are to be kept from any damages and shaft surface is to be superior. PTFE lip is never to be in contact with hand or metal object.
2. A special installation tool is to be employed and never a hammer.
3. PTFE lip seal installation is to be done with the plastic installation sleeve that comes with the product. Installation sleeve is to be removed after the installation.
4. PTFE lips are not to be lubricated. (PTFE material is suitable for dry running due to its very low coefficient of friction. In case of lubrication, majority of the ambient abrasives are drawn into the lubricant in between the lip and the shaft and this could potentially result in wear and eventually leakage.)
5. Do not start the engine sooner than 4 hours after installation. This permits the new sealing lip to adapt perfectly to the shaft.

SKT ürünlerine, otomotiv konusunda global bir katalog firması olan **TecAlliance** bilgi sistemi üzerinden de ulaşabilirsiniz.

You can access SKT products here via the **TecAlliance** information system, a global catalog company in the automotive industry.
